Product features

Operative norm:

- ISO 8528:AC generator set driven by reciprocating internal combustion engine
- IEC 60034-1:Basic technical requirements for rotating motors
- YD/T 502: Communication diesel generator set
- GB/T 20136-2006 General test method for internal combustion engine power stations Merit:
- 1. Integrated building block structure design, small volume, compact structure, sophisticated technology;
- 2. Few parts, light weight, low failure rate and low maintenance cost;
- 3. Supercharging and supercharging intercooling technology as the leading products, strong power;
- 4. High-performance damping system and rigid base, small vibration;
- 5. Efficient fuel supply system and air intake system, fuel atomization and air mixing more fully, more complete combustion, lower emissions;
- 6. Standardized design, comprehensive and intelligent products, parts and components have strong versatility, easy installation and easy maintenance;
- 7. maintenance-free battery, with fast start performance;

Technical parameters of the unit

Generator set

Generator model:	AG-100F/S	Main power(kW):	80
Standby power(kW):	<u>86</u>	unit capacity(kVA):	<u>100</u>
Rated speed(rpm):	1500	frequency(Hz):	<u>50</u>
Rated voltage(V):	400	Rated current(A):	144.3
Power factor(cosφ):	0.8(lag)	Wiring mode:	3 phase 4 wire
Generator weight (kg)	<u>1550</u>	Minimum smoke pipe diameter (mm)	1×φ64
Air intake(m³/min):	171.6	Air exhaust(m³/min):	165.6
			2500L×1100

Special instructions

- 1. Main power (PRP) is the maximum power that the unit can run continuously with variable load under standard environment (atmospheric pressure, relative humidity, ambient temperature), and the overload of 10% is allowed to run for 1h every 12h.
- 2. Working conditions and power correction:
 - (1) Altitude: ≤1500m (> 1500m), need to do power correction; Power reduction by 10% per 1000m increase)
 - (2) Ambient temperature: 40° C (when $> 40^{\circ}$ C, power correction is required)
 - (3) Relative humidity: $\leq 60\%$
- 3. When the field use conditions of the diesel generator set do not meet the above conditions, the output power of the unit should be corrected, and the final correction coefficient, please refer to the detailed technical data of the corresponding engine and generator.
