Special instructions

1. Main power (PRP) is the maximum power that the unit can run continuously with variable load under standard environment (atmospheric pressure, relative humidity, ambient temperature), and the overload of 10% is allowed to run for 1h every 12h.
2. Working conditions and power correction:
 - (1) Altitude: $\leq 1500\text{m}$ ($> 1500\text{m}$), need to do power correction; Power reduction by 10% per 1000m increase)
 - (2) Ambient temperature: 40°C (when $> 40^{\circ}\text{C}$, power correction is required)
 - (3) Relative humidity: $\leq 60\%$
3. When the field use conditions of the diesel generator set do not meet the above conditions, the output power of the unit should be corrected, and the final correction coefficient, please refer to the detailed technical data of the corresponding engine and generator.
